

# Dummy outdoor solar camera

## General information

This professional CCTV dummy camera in an outdoor housing and (fake) IR LED looks very realistic. Dummy cameras can't be used to protect properties, but they have a large preventive effect. With installing a dummy, you take full advantage of this.

The solar panel powers the continuously flashing LED indicator and charges the rechargeable batteries (not included). With sufficient lighting it's not even necessary to place batteries. The mounting bracket is included.
